You Are Stronger Than You Think

By Emmanuel Mihiingo Kaija

Sankofa Alkebulan University Publishing and Press

Dedication

To every child who is learning to believe in themselves,
to every little heart that tries even when things feel hard,
and to the grown-ups who guide, encourage, and cheer them on
every day.

Anote To Parents and Teachers

Dear Grown-Ups,

This book is for children aged 4 to 8 who are learning an important lesson: that they are stronger than they often think. Strength is not just about muscles or running fast. True strength comes from the heart, the mind, and the courage to try, even when something feels hard or scary. It is about believing in themselves, facing little fears, helping others, and learning from mistakes.

Children at this age are discovering who they are and how they fit in the world. They will make mistakes, feel frustrated, or want to give up sometimes. That is completely normal. Your guidance, encouragement, and patience are what help them grow their inner strength. This book includes stories, examples, and activities that show children how small steps, bravery, and kindness add up to real strength over time.

As you read with your child or student, take time to pause, discuss, and reflect. Ask questions like: “When did you feel strong today?” or “What is one thing you tried that felt tricky?” Celebrate effort, not just success, and show that mistakes are part of learning. Encourage them to try again, and let them see that asking for help or sharing feelings is also a sign of strength.

Use the activity pages and reflection prompts to make the ideas interactive. Drawing, writing, or talking about experiences helps children understand their feelings and recognize their personal power. Over time, they will begin to internalize the idea that they are capable, resilient, and courageous—even when things feel difficult.

Thank you for being a supportive guide and role model. With your help, children can discover that they are not only capable but also brave, confident, and ready to face the world with courage.

Part I: Understanding Strength

Chapter 1: What Does Strength Mean?

Strength is something we all have inside us, even if we cannot always see it. Sometimes we think strength is only about big muscles or being able to lift heavy things, but true strength is much more than that. Strength is about courage, kindness, patience, and trying new things. It is about believing in yourself, even when something feels hard or scary. Every time you try, even if you make a mistake, your strength grows a little more.

Think about a time when you were nervous to do something, like climbing a tall slide or speaking in front of your friends. At first, you might have felt afraid. Your hands might have felt wiggly, or your tummy might have fluttered like butterflies. That feeling is normal, and it is part of being brave. When you take a deep breath, say, "I can do this," and try anyway, you are using your strength. Your heart and mind are working together, showing that real strength is about being brave, not being perfect.

Strength is also about how we treat others. Helping a friend, sharing a toy, or saying kind words shows that your heart is strong. When you are patient, listen carefully, and help someone even when you feel tired, you are showing a different

kind of strength. Strength is not just about yourself—it grows when you care for others and when you use your actions to make the world a better place.

Even small steps count. Maybe you tried to tie your shoelaces for the first time, learned a new word, or spoke up in class. Each little action is a chance to grow your inner strength. Every time you try again, even after mistakes, your courage grows bigger. Strength grows slowly, like a tiny seed that becomes a strong tree, and every small step matters.

Think about it: What are some ways you have been strong today? Did you try something new, help someone, or keep going even when it felt tricky? Each little moment is proof that you have strength inside you, and you are learning how to use it every single day.

Try this today: Take a deep breath and think of one thing that feels a little hard. Say to yourself, “I am strong. I can try.” Then take one small step. Notice how it feels afterward. You are growing your strength one step at a time, and every step makes you stronger than you think.

Chapter 2: Everyone Has Strength Inside

Did you know that every single person has strength inside

them? Even if someone is small, quiet, or feels shy sometimes, there is always a little bit of courage, patience, and power hiding inside their heart and mind. Strength is not something you can only see, like muscles or running fast—it is something you feel and use every day in different ways.

Sometimes we think that strong people never get scared or never make mistakes. That is not true! Even the strongest people feel nervous, worried, or unsure. The secret is that they keep trying, keep learning, and keep believing in themselves. That is how their strength grows. Every child has this same secret strength inside them, waiting to be discovered.

Your strength can show in many ways. Maybe you helped a friend when they fell down, even if you were scared to step in. Maybe you tried a new food, spoke in front of your class, or cleaned up your toys without being asked. These are all ways your inner strength comes out. Each time you do something brave or kind, you are practicing your power and letting it grow bigger and brighter inside you.

Even when mistakes happen, your strength is still there. Making mistakes does not mean you are weak. It means you are learning, growing, and practicing your courage. Every time you try again after a mistake, your strength grows stronger. Your heart and mind become more confident, and you start to see that you can handle more than you thought you could.

Think about this: Look at the people around you—your friends, brothers, sisters, or even grown-ups. Everyone has strength inside, just like you. Sometimes they show it by helping others, sometimes by trying new things, and sometimes by being patient when something is hard. The wonderful thing is that you can learn from each other, and your strength can inspire others to be brave too.

Try this today: Take a quiet moment and think about one thing you did today that showed your strength. It could be trying something new, helping someone, or being patient. Draw a picture or tell a grown-up about it. Every time you notice your own strength, it grows a little bigger, and you realize—you are stronger than you think!

Chapter 3: Your Mind Is Powerful

Did you know that your mind is one of the strongest parts of you? Your brain is full of ideas, thoughts, and feelings that help you make choices, solve problems, and learn new things every day. Sometimes your mind tells you, “I can do this!” and other times it might say, “This is too hard.” The amazing thing is that you get to decide which thoughts to listen to and which thoughts to change. This is how your mind becomes powerful.

Your mind can help you be brave, kind, and strong. When you

face something tricky, like learning to ride a bike, reading a new word, or trying a new game, your mind can give you courage. You can say to yourself, “I can try. I am learning,” and your brain will help you focus and keep going. Even if your first try doesn’t work, your mind can guide you to try again. Every time you practice thinking this way, your power grows.

Sometimes your mind might trick you and make things feel harder than they really are. You might think, “I can’t do it,” or “I will fail.” That is okay—everyone’s mind does this sometimes. The secret is to pause, take a deep breath, and choose a better thought. For example, you can change “I can’t do it” into “I can try, and I will learn.” When you do this, your mind becomes a tool that helps you grow stronger, not something that holds you back.

Your mind is also powerful when you use it to notice your feelings and the feelings of others. Thinking about how a friend feels, or understanding that mistakes are part of learning, helps your heart grow strong too. Your thoughts and your heart work together—when you practice good thoughts and kind actions, your strength grows in many ways.

Try this today: Think of something that feels tricky or scary. Close your eyes, take a deep breath, and say, “I can do this. I am learning.” Notice how your mind helps you feel brave and ready to try. Each time you use your thoughts this way, you are making your brain stronger and discovering how powerful your

mind really is.

Part II: Strength at Home

Chapter 4: Helping Yourself and Others

Being strong at home is not just about lifting heavy things or doing big tasks—it is also about helping yourself and helping the people around you. Strength shows when you take care of yourself, try new things, and offer kindness to your family. When you help yourself and others, your heart feels warm, your mind feels proud, and your inner strength grows bigger each day.

Helping yourself can be simple. Maybe you put away your toys after playing, brush your teeth by yourself, or get dressed without asking for help every time. These small actions show that you are learning to take care of yourself, and that is a big part of being strong. Each time you try, even if you make a mistake, you are practicing patience, courage, and confidence. Your brain learns that you can solve problems and handle challenges, and your heart learns that you can feel proud of yourself.

Helping others is just as important. When you see a brother, sister, or parent struggling with something, you can offer your hands, your ideas, or your kind words. Maybe you help your little sibling tie their shoes, carry a cup of juice carefully, or say something encouraging when someone feels sad. Each time you help, you are using your strength in a way that makes your

home happier and safer. Your courage grows because you are brave enough to step in and make a difference.

Sometimes helping yourself and others can feel hard. Maybe you feel tired, frustrated, or unsure about what to do. That is normal. Even strong children feel that way. The important part is to try anyway. You can pause, take a deep breath, and ask yourself, “What can I do to help?” Then take one small step. Each small act of courage, patience, or kindness is a building block for your inner strength.

Try this today: Look around your home and notice one way you can help yourself or someone else. Maybe it is putting away your shoes, helping a sibling, or saying a kind word. Take that step, and notice how it makes you feel. You will see that strength grows every time you care for yourself and others, even in little ways. Remember—every small action counts, and your heart and mind are growing stronger with each one!

Chapter 5: Trying New Things at Home

Being strong means being brave enough to try new things, even when they feel tricky or a little scary. At home, there are so many chances to practice this kind of strength. Maybe it is learning to pour your own juice, helping cook a meal, tying your shoelaces, or cleaning up your toys in a new way. Even if it feels hard at first, every new thing you try is a step toward

growing your courage and confidence.

Sometimes new things can make your tummy feel funny or your hands feel wiggly. That is normal! Feeling nervous or unsure does not mean you are not strong—it means you are ready to learn and grow. You can take a deep breath, tell yourself, “I can try this. I am learning,” and take one small step. Each step, no matter how tiny, makes your strength bigger, and your heart feels proud of what you accomplished.

Trying new things is also about learning from mistakes. Maybe the juice spills, the shoelaces tangle, or the toy doesn't fit together the first time. That is okay! Mistakes are a part of learning. When you try again, you show your inner strength. You are telling yourself and everyone around you that you do not give up, and that is true courage. Your mind learns to think, “I can solve this,” and your heart learns, “I can handle challenges.”

You can also help others try new things. If a sibling or friend feels nervous, you can offer your hands, words, or encouragement. Saying, “You can do it!” or showing how something works is a way to use your strength to help someone else. When you do that, your heart grows even bigger because kindness and courage work together.

Try this today: Pick one new thing to try at home. Close your eyes, take a deep breath, and tell yourself, “I can do this. I am

learning.” Take your first step slowly, and notice how proud you feel. Even if it doesn’t work the first time, keep trying. Every try makes your heart braver, your mind stronger, and your strength grow. Remember—every small effort is a big part of becoming stronger than you think!

Chapter 6: Helping Others Learn at Home

Being strong at home is not only about helping yourself—it is also about helping the people around you learn and grow. When you teach a sibling, friend, or even a parent something new, you are using your courage, patience, and kindness. Helping others learn shows that your strength is not just inside you—it spreads out and makes the whole home a happier, safer, and more confident place.

Helping someone learn can be simple. Maybe your little brother or sister is trying to tie their shoes for the first time. You can show them step by step, and cheer when they do it right. Maybe a parent asks you to help set the table in a new way, or show a younger sibling how to draw a picture. When you guide them gently, you are using your strength in a way that helps others feel proud and capable too.

Sometimes helping others learn can feel tricky. Maybe the person you are teaching makes mistakes, or gets frustrated.

That is okay! Patience is a part of being strong. You can take a deep breath, smile, and say, “It’s okay! Let’s try again together.” Your kindness helps them feel safe to keep trying, and your courage helps you stay calm and supportive. Every time you practice patience and encouragement, your own strength grows even bigger.

Helping others also teaches you new things. When you explain, show, or guide someone, your brain becomes sharper. You learn to solve problems, think carefully, and understand different ways of doing things. Your heart grows too, because every act of kindness, every word of encouragement, and every patient step shows that you care about the people around you.

Try this today: Notice someone at home who is learning something new. Offer your help, patience, or kind words. Show them step by step, cheer for them, and remind them it is okay to make mistakes. Watch how proud they feel—and notice how proud you feel too. Every time you help someone else grow, your own strength grows bigger, and you are learning that true power comes from helping yourself and others at the same time.

Part III: Strength at School

Chapter 7: Being Brave in Class

School is a place full of chances to be brave and strong. Every day, you meet new challenges, learn new things, and practice using your courage in many ways. Being brave in class is not about being the loudest or fastest—it is about trying, paying attention, and sharing your ideas even when you feel nervous. Your bravery helps you grow, and it helps others see how strong you can be too.

Sometimes being brave in class feels scary. Maybe you are asked a question and you are not sure of the answer. Maybe you need to read aloud or show your work in front of your friends. Your tummy might flutter like butterflies, and your hands might feel wiggly. That is normal! Feeling nervous is part of being brave. Courage is not about never feeling scared—it is about trying anyway, even when your heart beats fast.

You can practice being brave in simple ways. Raise your hand to answer a question, even if you are unsure. Share your idea with a friend, or try reading a sentence aloud. When you make a mistake, remember that mistakes are part of learning. Your teacher and classmates understand, and every time you try again, your courage grows stronger. You are teaching your brain and heart that you can face challenges and learn from

them.

Being brave also means being kind and helping others be brave. If a classmate looks worried, you can smile, say, “You can do it!” or show them how something works. Bravery is not only about what you do for yourself—it is also about encouraging courage in others. Your words and actions help everyone feel safe, confident, and ready to try new things.

Try this today: Think of one brave action you can do in class tomorrow. Maybe it is raising your hand, reading a word, or helping a friend understand a lesson. Take a deep breath, believe in yourself, and take that step. Notice how proud and strong you feel afterward. Each time you practice bravery in school, your heart, mind, and strength grow bigger—and you learn that being brave helps you grow in every part of your life.

Chapter 8: Learning From Mistakes in Class

Mistakes are a normal part of learning, and school is a wonderful place to see that in action. Sometimes, you might get a question wrong, spell a word incorrectly, or forget how to solve a problem. That does not mean you are not smart—it means you are learning, practicing, and growing. Mistakes are like little teachers that help your brain and heart become stronger every day.

When a mistake happens, it is okay to feel a little frustrated or sad. Your tummy might feel funny, and your mind might tell you, “I can’t do this.” That is normal, but it is not the truth about your ability. The truth is that every mistake is a chance to try again and do better. You can take a deep breath, smile, and say to yourself, “It’s okay. I am learning, and I can try again.” Each time you do this, your courage grows, your brain learns, and your heart feels proud.

Learning from mistakes can also be fun! You can ask questions, try a new way of solving a problem, or even draw a picture to help yourself understand. Sometimes, sharing your mistakes with a teacher or friend can help you see a different way to do things. Helping each other learn from mistakes makes everyone stronger and shows that mistakes are not something to be afraid of—they are stepping stones to learning and success.

Mistakes also teach patience and kindness. When you see a classmate make a mistake, you can say, “It’s okay! Let’s try together,” or offer a smile of encouragement. Being kind to others helps you build courage and strength in your own heart. Your classroom becomes a place where everyone feels safe to try, learn, and grow—because mistakes are a natural and important part of learning.

Try this today: Think of one mistake you made in class. Take a deep breath, and ask yourself, “What can I learn from this?” Try

again, slowly and carefully, or ask for help if you need it. Notice how your brain grows smarter, your heart grows braver, and your courage grows bigger. Remember—every mistake is a step forward, and learning from them helps you grow stronger every day.

Chapter 9: Being Kind While Learning

Learning is not only about reading, writing, or counting—it is also about using your heart. Being kind while learning means helping yourself and others with gentle words, patient actions, and a friendly smile. When you are kind in class, your brain and your heart grow stronger at the same time. Kindness makes learning easier, more fun, and more special for everyone around you.

Sometimes learning can feel hard. Maybe a math problem is tricky, or a new word is confusing. Your mind might say, “I can’t do this,” and your feelings might make you want to give up. That is normal! Being kind while learning means you give yourself a little patience and encouragement. You can say, “It’s okay. I am trying. I can do this,” and take one small step. Each time you try with kindness, your courage and confidence grow, and your mistakes start to feel smaller.

Being kind to others while learning is important too. Maybe a

classmate doesn't understand a lesson, or they made a mistake. You can offer a smile, say, "You can do it!" or show them gently how to try again. Helping each other in this way makes everyone feel safe and happy. You also practice patience, teamwork, and understanding—strengths that make your heart and brain even more powerful.

Even small acts of kindness while learning matter. Sharing pencils, helping a friend find a book, or saying "thank you" to your teacher are all ways to use your heart while you grow your brain. Kindness and courage work together—when you are kind, your confidence grows, and when you are brave, your kindness shines even brighter.

Try this today: Notice one way you can be kind while learning. Maybe it is encouraging a friend, being patient with yourself, or helping someone understand a new idea. Take that step slowly and with a smile. See how your heart feels warm, your mind feels strong, and your courage grows bigger. Remember—kindness makes learning happier, easier, and stronger for everyone, including you!

Chapter 10: Taking Care of Your Brain

Your brain is like a superpower inside your head. It helps you think, learn, remember, and solve problems. It also helps you

feel happy, calm, or brave. Because your brain does so much for you every day, it is important to take care of it. When you take care of your brain, it grows stronger, your mind feels sharper, and your heart feels ready for anything.

Taking care of your brain can be fun and simple! Eating healthy foods like fruits, vegetables, and whole grains helps your brain grow strong. Drinking enough water, moving your body, and getting plenty of sleep also give your brain the energy it needs to work well. Even resting quietly, reading a book, or drawing can help your brain stay happy and healthy. Every small thing you do to care for your brain makes it easier to think, learn, and try new things.

Your brain also likes kindness and happy thoughts. When you say, “I can try” or “I am learning,” your brain feels encouraged. When you practice patience, take deep breaths, or say kind words, your brain feels calm and strong. Even when mistakes happen, reminding yourself that it’s okay to try again helps your brain learn faster and become more powerful. Your thoughts, actions, and feelings all work together to make your brain stronger every day.

Sometimes your brain can feel tired or confused, especially when you are learning something new. That is normal! You can help your brain by taking a little break, asking for help, or trying again later. Every time you do this, your brain practices solving problems and staying calm. You are training it to be ready for

anything, and each small effort helps you grow smarter and braver.

Try this today: Think of one thing you can do to take care of your brain. Maybe it is eating a healthy snack, moving your body, practicing a deep breath, or trying a new idea with patience. Notice how your brain feels happier, your heart feels calm, and your mind feels ready to learn. Remember—your brain is your superpower, and taking care of it helps you grow stronger, smarter, and braver every day!

Part V: Growing Your Inner Strength

Chapter 11: Learning From Challenges

Challenges are like little mountains you climb every day. Sometimes they are small, like putting on your shoes by yourself, or tying your shoelaces. Sometimes they are bigger, like learning a new game, speaking up in class, or trying a tricky puzzle. At first, challenges can feel scary or hard. Your brain might whisper, “I can’t do this,” and your tummy might flutter like butterflies. That is normal—it means you are about to practice your courage and your strength.

When you face a challenge, remember that your strength is not just in your muscles. Your strength is in your heart, your mind, and your patience. Taking a deep breath, trying again, or asking for help are all ways your inner strength grows. Even small steps count. Maybe you tie one shoelace at a time, finish a tricky puzzle piece by piece, or help a friend solve a problem slowly. Each step, no matter how small, is your strength growing bigger, brighter, and stronger.

Sometimes challenges make you feel frustrated, sad, or worried. That is okay! Feeling these things shows that you care and that your strength is ready to grow. When you notice your feelings, pause, take a deep breath, and say to yourself, “I am stronger than I think. I can try again.” Every time you do this,

your confidence grows, your courage grows, and you see that you are capable of more than you imagined.

Try this today: Pick one challenge you can face, like a new skill, a tricky game, or helping a friend. Take a deep breath, focus, and try your best. Notice how your heart feels brave, your brain feels sharper, and your courage grows. Every challenge is a chance to grow your inner strength.

Chapter 12: Helping Others Grow Strong

Your strength is even more powerful when you share it with others. When a friend, sibling, or classmate struggles, you can encourage them, show patience, and cheer them on. Even small acts of kindness, like saying, “You can do it!” or helping someone take one step at a time, make a big difference. When you help others grow, your strength grows too—it becomes bigger and brighter inside you.

Helping others also shows you how strong you really are. When you encourage someone else, you remember that your courage and patience are part of your own power. Maybe you helped a friend learn a new game, cheered for a classmate, or taught someone how to keep going after a mistake. Every time you do this, your heart grows bigger, your mind becomes wiser, and

your inner strength shines brighter.

Being strong and helpful does not mean you are perfect. Sometimes it is hard to help, and mistakes happen. That is okay! Your strength is about trying, caring, and practicing bravery—not always being right. Each small act of kindness and courage teaches your brain, your heart, and your spirit how amazing you are and how strong you can become.

Try this today: Think of one way to help someone grow strong. Maybe it is showing a friend how to do something, cheering for someone who feels nervous, or helping a sibling learn a new skill. Notice how your heart feels bigger, your courage grows, and your inner strength shines each time you lend a helping hand.

Chapter 13: Celebrating Your Strength

It is important to celebrate your strength every day. Every time you try, keep going, or help someone, you are showing your inner power. Celebration helps you notice how far you have come, how brave you have been, and how capable you truly are.

Celebration can be small or big. Maybe you clap your hands,

smile at yourself in the mirror, or tell a grown-up what you did. Maybe you draw a picture, dance a happy dance, or write down a small story. Every celebration reminds you that your heart, mind, and courage are growing stronger. It also gives you energy to try again and keep learning.

Your strength grows each time you try something new, face a challenge, help someone, or fix a mistake. It is always inside you, ready to shine—even when things feel hard or scary. Remember: you are braver than you think, stronger than you feel, and more capable than you know.

Try this today: Think of one thing you did this week that showed your strength. Celebrate it! Smile, cheer, or share it with someone you love. Every celebration helps your inner strength grow, and every brave step reminds you that you are stronger than you think.

Back Matter: You Are Stronger Than You Think

Strength Activity Pages

1. Draw Your Strong Moment

Think of a time you showed courage, patience, or kindness. Maybe you tried a new game, spoke up when you were nervous, or helped a friend. On this page, draw a picture of yourself being strong. Use colors, smiles, and details that show how brave and proud you felt. Add little notes or words if you like. Every time you draw, you remember how capable you are.

2. My Strength Journal

Write or tell a story about something that felt hard, but you tried anyway. What made it tricky? How did you act? What happened after you tried? If writing is hard, draw your story and ask someone to help you add words. Journaling helps you see your courage and track your growth, showing that each small step makes you stronger.

3. Strength Challenge

Try one brave or helpful thing each day this week. Here are some ideas:

- Try a task you have never done alone
- Speak kindly to a friend who feels unsure

- Help a sibling or classmate with a small task
- Keep going even if something feels hard

Each time you do it, notice how your heart feels and circle the day on your calendar. Every brave choice helps your inner strength grow.

Reflection Prompts

Take a few quiet moments to think, draw, or share your answers with a grown-up:

- When did you feel nervous but tried anyway?
- What makes your heart feel strong?
- How did helping someone else make you feel brave?
- What challenge this week taught you the most about your own strength?

Reflection helps you understand your courage, notice your

growth, and prepare for new challenges with confidence.

Strength Promise

Repeat this promise every morning or whenever you feel a little unsure:

"I am strong.
I try even when things feel hard.
I help others and myself.
My courage grows bigger every day.
I am stronger than I think."

Say it quietly in your mind, out loud to yourself, or with a friend or family member. Each time you repeat it, your inner strength grows a little more.

For Grown-Ups: Helping Children Build Strength

1. Encourage effort, not just results

Celebrate trying, persistence, and creative solutions, not only

success.

2. Model strength in action

Show children how you handle challenges, mistakes, or nervous moments. Talking about your own experiences teaches them that everyone grows through effort.

3. Talk about feelings and courage

Help children name their emotions, notice moments of bravery, and see how feelings connect to strength.

4. Celebrate every small step

Encourage children to notice their progress and reflect on accomplishments, even if they are small. Recognition reinforces confidence and resilience.
